

simplebnf Regression Tests

Test 1: Backslash command in or-sym (\;)

Expr $e ::= x \mid \lambda x.e$

Test 2: or-sym with \quad

Type $\tau ::= \text{int} \mid \text{bool} \mid \text{string}$

Test 3: or-sym with \mid

Expr $e ::= x \mid n \mid e + e$

Test 4: or-sym with \vert

Value $v ::= n \mid \lambda x.e$

Test 5: or-sym with plain math pipe (default)

Stmt $s ::= x \mid n \mid e + e$

Test 6: or-sym with \hspace

Pat $p ::= x \mid - \mid (p, p)$

Test 7: or-sym with \ensuremath

Decl $d ::= \text{val} \mid \text{fun} \mid \text{type}$

Test 8: Empty or-sym

Expr $e ::= x \mid n \mid e + e$

Test 9: Default or-sym with single-line delimiters

Type $\tau ::= \text{num} \mid \text{str}$
Expr $e ::= x \mid n \mid e + e$

Test 10: Custom single-line-delim with backslash or-sym

Expr $e ::= x \mid n \mid e + e$ expressions

Test 11: or-sym with \, (thin space)

Kind $k ::= \star \mid k \rightarrow k$

Test 12: Multiple productions with backslash or-sym

Type $\tau ::= \text{num}$
 $\quad \mid \text{str}$
Expr $e ::= x \mid \lambda x.e \mid e e$

Test 13: Line-break delimiter inside alternative

Expr $e ::= \text{verylongtoken verylongtoken verylongtoken verylongtoken}$
continued tokens still part of the same alternative long form

Test 14: Full-line comments with \bnfcomment*Types*Type $\tau ::= \text{num} \mid \text{str}$ *Expressions*Expr $e ::= x \mid n \mid e + e$ **Test 15: Multiple relations (::=, -!, :in:)**Type $\tau ::= \text{num}$
 $\mid \text{str}$ Expr $e ::= x$
 $\mid \lambda x.e$ Context $\Gamma \in (x \quad \tau) \text{ list}$ **Test 16: Commented LHS**Variable $x ::= a \mid b \mid c$ Number $n ::= 0 \mid 1 \mid \dots$ **Test 17: or-sym with \! (negative thin space)** $e ::= x \mid n \mid e + e$ **Test 18: or-sym = purely backslash commands**Term $t ::= x \mid \lambda x.t \mid t t$ **Test 19: Tilde workaround (backwards compat)**Expr $e ::= x \mid \lambda x.e$ **Test 20: Single alternative (no //) — no split needed**Expr $e ::= \lambda x.e \quad \text{lambda abstraction}$ **Test 21: Many single-line alternatives**Expr $e ::= a \mid b \mid c \mid d \mid e \mid f \quad \text{lots of forms}$ **Test 22: Mixed new-line and single-line delimiters**Expr $e ::= x$ variable
 $\mid n \mid m$ numerals
 $\mid e + e \mid e - e$ arithmetic
 $\mid \lambda x.e$ abstraction**All 22 tests compiled successfully.**
